
**MINDFULNESS-BASED CHRONIC PAIN MANAGEMENT PROGRAM (MBCPM™)
REFERRAL FORM**

PART A: HEALTH CARE PROFESSIONAL PRE-REFERRAL CHECKLIST

To the Health Care Professional making this referral: To ensure your time making this referral is worthwhile, please complete the checklist below before completing and faxing the referral.

The Applicant (your patient):

- Has a physician (MD) or nurse practitioner (NP) referral;
- Has no active or unmanaged mental illness or addiction that might prevent appropriate participation of the applicant, or cause disruption to others, in the group;
- Is not actively suicidal;
- Has an adequate command of the language in which the course will be taught;
- Has adequate hearing/hearing supports to hear the facilitation and meditation guidance;
- Is cognitively able to benefit from group work;
- Understands there will be a commitment of a 2.5-hour class per week for 12 or 13 weeks and that consistent attendance is advisable;
- If the course is online (via Zoom), has stable internet and access to a computer or tablet with audio and preferably video capabilities
- Understands that the online classes should be conducted in a quiet location suitable to their comfort and viewed in private away from others;
- Knows there will be an expectation to practice Mindfulness and do readings from the materials at home, and is willing and able to make the commitment;
- Understands there is a charge for course materials of around \$90 and that, if financially challenged, they can discuss payment options;
- Will be contacted only when course enrolment is beginning;
- Will give the enrolment coordinator/facilitator as much notice as possible if they need to cancel and knows to look at the website: www.neuronovacentre.com to find the contact information to do so. There may be a wait list so it is important someone else is offered the spot; and,
- Knows that the course, if taught by an MD, is covered by OHIP in Ontario.

PART B: PATIENT INFORMATION

For course facilitators/locations and corresponding contact information/fax number, see Part E. Select course and complete with your physician or nurse practitioner (please print):

Attention Course Facilitator: _____ Fax number: _____

Patient Name		Date of Birth (YYYY/MM/DD)		<input type="checkbox"/> Male <input type="checkbox"/> Female <input type="checkbox"/> Other	
Health Card Number	Version Code	Expiry Date (YYYY/MM/DD)	Preferred site to attend course		
Address			email		
City		Province	Postal Code		
Home Phone	Cell Phone		Alternate Phone		

PART C: REFERRING PHYSICIAN INFORMATION

Please print. When complete, please (a) fax to the number indicated above and (b) provide your Patient with the Part D: [Patient Mindfulness Practice Fact Sheet](#).

Physician Name			Place stamp or label here		
Address					
City	Province	Postal Code			
Phone Number		Fax Number			
OHIP Billing No.					
Family Physician (if different from above)					
Reason for Referral:					
			Has this patient attended the Mindfulness-Based Chronic Pain Management Program (MBCPM™): <input type="checkbox"/> Yes <input type="checkbox"/> No		
Referring Physician Signature			Date of Request (MM/DD/YYYY)		

PART D: PATIENT MINDFULNESS PRACTICE FACT SHEET

Welcome! Your doctor has referred you to a Mindfulness-Based Chronic Pain Management (MBCPM™) course. Classes may be weekly over a 12- to 13-week period, and due to COVID, are now online or via telemedicine. Please check with your preferred facilitator for details (Part E). Your Ontario provincial health plan may cover the cost of the course except for a fee for materials, if your facilitator is an MD or on staff at a health facility. Otherwise costs for the course will vary.

For online classes, please ensure you are viewing in a comfortable and private location.

There may be a wait before you are contacted for enrolment if your referral was received a few months before a course is available.

Ways this course can help your pain, stress or depression, or other health condition include:

- Formal meditation practice, which can be as little as ten minutes a day, increases ability to become calm and stay calm. The reduction in stressed feelings improves physical pain since stress compromises immune functioning, which we need for the body to heal, and stressful events usually trigger pain exacerbations. Mindfulness therefore allows better pain control;
- Meditation practice reduces the subconscious dread and fear of pain, so the sensation of pain doesn't result in as much negative brain "chatter": Research shows that the part of the brain which naturally dulls pain is much more active in meditators, 24/7;
- Mindfulness practice improves insight, seeing more clearly how the pain/illness exacerbations relate to the psychosocial cues/triggers, such as dealing with difficult people. Therefore, knowing the relationship to a stressful pain-triggering event stops the worry about what the increase in pain might mean -- no, it is not your body getting worse, or something more sinister happening to you;
- Sleep may improve since mindfulness reduces rumination – recurrent negative thinking. Sleep directly supports the immune system to promote physical healing and supports mood regulation and coping with pain;
- There is wiser, safer movement of the body when staying present with the task at hand, and therefore, less clumsiness due to "not being present" resulting in careless/mindless of ways of moving the body. With greater attention to the present moment, we are also better able to "pace" ourselves through an activity;
- Practice in acceptance of the way things are right now reduces anger, impatience, and frustration, which reduces the frequency of pain exacerbations and causes pain medications to be more effective. It is also less fatiguing to be calmer. Genuine acceptance of limitations—in this moment--leads to healthy boundaries and better choices regarding the activities you can pursue and, strangely, leads to better function;
- Participants are often clearer in mind, experience greater motivation, and make better choices about adding other, additional pain management strategies. Nutrition, exercise, and sleep improve with better self-care motivation; and,
- Finally, meeting with others in MBCPM™ courses creates a sense of community and belonging, and not feeling so isolated by the pain experience. This results in changing old habits for better ones more reliably, and better coping with pain. NNC community support and formal practice continues with your participation in our **NeuroNova Connect Mindfulness Matters** weekly maintenance available throughout the year, exclusive to NNC alumni at a nominal fee.
